

(57) Abstract

The invention relates to a joint arrangement  
 for a surface structure, such as a protecting  
 plate, element or the like, which surface  
 structure is meant particularly for covering  
 of ground together with one or several other  
 surface structures for <sup>improving</sup> temporary protecting <sup>and</sup>  
 coating and/or like of the ground. In connec-  
 tion with the surface structure there has  
 been arranged at least a joint arrangement  
 for removable attachment of one or several  
 adjacent surface structures ~~to the same~~ and  
 the thermal insulation (1), that comprises at  
 least one, essentially plastic based, such as  
 cellular, expanded, foamed plastic structured  
 or a like thermal insulation layer (1'). The  
 joint arrangement <sup>includes</sup> comprises a joint piece  
 (x), by means of which the surface structures  
 may be coupled with each other essentially by  
~~corners of the same by means of~~ a locking  
 assembly (y) <sup>at the corners thereof,</sup> operating advantageously by  
 quick-locking principle.
